DETAILED ACTION

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 7, Chen et al (US 6,950,406) teaches a receiver for signals received on a wireless network (see fig.1, wireless connections between items 1 and 7), said receiver working at a so-called reference oscillation frequency (see column 1, lines 45-63, the teaching of Chen inherently teaches "reference oscillation frequency") and demodulation means for demodulating the received signal (see column 3, lines 24-27). Chen fails to teach the oscillation frequency being controlled by means of a so-called reference value, including: means of estimating a mean value of the demodulated signal, means of correcting the mean value of the demodulated signal to the reference value, decision means for determining the binary values adopted by the received signal, characterized in that the estimation means include first means of rapid extraction of a first mean value of the demodulated signal used in decision means during a first period of time and second means of slow extraction of a second mean value of the demodulated signal used in correction means and, during a second period of time, in decision means.

Dependent claims 2-6 are allowable for the same reason.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. Edwards (US 6,947,490) teaches cellular radio communications system.
- b. Chiodini (US 6,950,483) teaches timing misalignment estimation.
- c. Suenaga (US 6,950,626) teaches receiver having retransmission function.
